Pekom

LIGHTNING PROTECTION SPECIALIST

since 1969

Dragi kupci! *Dear customers!*

Pekom je kompanija posvećena stvaranju vrhunskih rešenja u oblasti gromobranske zaštite, nastavljajući da gradi budućnost na čvrstim temeljima tradicije. Akvizicijom kompanije Optim iz Slovenije, čija istorija datira još iz 1969. godine, preuzeli smo bogato iskustvo i znanje koje traje više od pola veka.

Danas, spojem inovacija i proverenog kvaliteta, Pekom postavlja nove standarde sigurnosti i pouzdanosti. Naš tim svakodnevno radi na unapređenju proizvoda kako bismo opravdali vaše poverenje i obezbedili rešenja koja traju generacijama.

Pekom is a company dedicated to creating superior solutions in the field of lightning protection, continuing to build the future on the solid foundations of tradition. With the acquisition of the company Optim from Slovenia, whose history dates back to the 1969s, we took over rich experience and knowledge that lasts more than half a century.

Today, with a combination of innovation and proven quality, Pekom sets new standards of safety and reliability. Our team works daily to improve our products to earn your trust and provide solutions that last for generations.

Marko Peković

Kvalitet na prvom mestu!
Quality in the first place!

ZAŠTITA OD GROMA

LIGHTNING PROTECTION

Svrha sistema zaštite od groma je zaštita objekata od direktnih udara groma. Udar groma u objekte je opasan za ljude, same objekte njihov sadržaj i instalaciju. Mere zaštite koje se razmatraju u seriji standarda EN 62305 pokazale su se veoma efikasnim u smanjenju rizika. Na osnovu standarda EN 62305 se vrši projektovanje, izvođenje i održavanje instalacija i sistema za zaštitu od atmosferskog pražnjenja objekata bez obzira na njihovu visinu. Ovi standardi su namenjeni projektantima i izvođačima radova, kao i osobama koje vrše proveravanje i ispitivanje gromobranske instalacije.

The purpose of the lightning protection system is to protect structures from direct strikes. A lightning strike to structures is dangerous for people, the structures themselves, their contents, and installations. The protective measures considered in the EN 62305 series of standards have proven to be very effective in reducing risk. Based on the EN 62305 standard, the design, implementation, and maintenance of installations and systems for the protection of structures from atmospheric discharges are carried out regardless of their height. These standards are intended for designers and contractors, as well as for those who perform verification and testing of lightning protection installations.

	TABELA 1
EN 62305-1	ZAŠTITA OD ATMOSFERSKOG PRAŽNJENJA- DEO 1 OPŠTI PRINCIPI <i>Protection against lightning Part 1: General principles</i>
EN 62305-2	ZAŠTITA OD ATMOSFERSKOG PRAŽNJENJA- DEO 2 UPRAVLJANJE RIZIKOM <i>Protection against lightning Part 2: Risk management</i>
EN 62305-3	ZAŠTITA OD ATMOSFERSKOG PRAŽNJENJA- DEO 3 FIZIČKO OŠTEĆENJE OBJEKATA I OPASNOST PO ŽIVOT <i>Protection against lightning Part 3: Physical damage to structures and life hazard</i>
EN 62305-4	ZAŠTITA OD ATMOSFERSKOG PRAŽNJENJA- DEO 4 ELEKTRIČNI I ELEKTRONSKI SISTEMI U OBJEKTIMA <i>Protection against lightning Part 4: Electrical and electronic systems within structures</i>
CLC/TR 50469	Sistemi zaštite od atmosferskog pražnjenja – Simboli <i>Lightning protection systems – Symbols</i>

Drugi deo čini sedam standarda EN 62561 odnose se na elemente instalacije za zaštitu od atmosferskog pražnjenja.

Materijali i komponente za sisteme zaštite od groma moraju biti dizajnirani i testirani za električna, mehanička i hemijska opterećenja (npr. korozija) koja se mogu očekivati tokom upotrebe. Ovo se odnosi na sve komponente.

The second part consists of seven standards EN 62561 refer to installation elements for protection against atmospheric discharge.

Materials and components for lightning protection systems must be designed and tested for the electrical, mechanical and chemical stresses (eg corrosion) that can be expected during use. This applies to all components.

EN 62305-1: Opšti principi

EN 62305-1: General principles

Deo sadrži informacije o riziku od udara groma, karakteristikama groma i parametrima koji se koriste za simulaciju efekata udara groma.

The section contains information on the risk of lightning strikes, the characteristics of lightning and the parameters used to simulate the effects of lightning strikes.

EN 62305-2: Procena rizik

EN 62305-2: Risk management

Upravljanje rizikom u skladu sa standardom EN 62305-2 uključuje analizu rizika kako bi se utvrdilo da li je potrebna zaštita od groma. Zatim se definiše tehnički i ekonomski optimalna mera zaštite.

Risk management according to EN 62305-2 includes a risk analysis to determine whether lightning protection is required. Then the technically and economically optimal protection measure is defined.

EN 62305-3

Ovaj deo standarda se bavi zaštitom od fizičkog oštećenja u objektima i oko njih i zaštitom živih bića od povreda usled napona dodira i napona koraka. Sistem zaštite od groma se sastoji od spoljašnjeg i unutrašnjeg sistema zaštite.

Spoljašnja gromobranska zaštita deli se na:

- Prihvatni sistem – namena da prihvati udar groma u objekat
- Spusni sistem – bezbedno odvede struju groma prema zemlji
- Uzemljivački sistem – izvrši disperziju struje groma u zemlji

This part of EN 62305 deals with the protection, in and around a structure, against physical damage and injury to living beings due to touch and step voltages. The lightning protection system usually consists of both external and internal lightning protection systems.

- intercept a lightning flash to the structure (with an air-termination system),
- conduct the lightning current safely towards earth (using a down-conductor system),
- disperse the lightning current into the earth (using an earth-termination system).

Prihvatni sistem

Za projektovanje prihvatnog sistema koriste se sledeće metoda:

- metoda zaštitnog ugla
- metoda fiktivne sfere
- metoda prihvatne mreže

Metoda zaštitnog ugla je pogodna za jednostavne objekte ili isturene delove većih objekata

Metoda fiktivne sfere je pogodna za objekte složenog oblika

Metoda prihvatne mreže služi za opšte namene i naročito je pogodna za zaštitu ravnih površina.

Air-termination systems

The following methods are used to design the Air-termination systems:

- the protection angle method;
- the rolling sphere method;
- the mesh method.
- the protection angle method is suitable for simple objects or projecting parts of larger objects
- the rolling sphere method is suitable for objects of complex shape
- the mesh method serves general purposes and is particularly suitable for the protection of flat surfaces.

Klasa zaštite LPS-a Class of LPS	Metoda zaštite Protection method			Udaljenost između spusnih provodnika Typical down conductor spacing (m)
	Poluprečnik fiktivne sfere r (m) Rolling sphere radius r (m)	Zaštitni ugao α° Protective method α°	Veličina okca mreže W(m) Mesh size W(m)	
I	20		5x5	10
II	30		10x10	10
III	45		15x15	15
IV	60		20x20	20

Slika 1. Projektovanje prihvatnog sistema primenom metode fiktivne sfere

Picture 1. Design of an air-termination system according to the rolling sphere method

Prihvatni sistem je adekvatno postavljen ako nijedna tačka objekta koji se štiti ne dodiruje sferu poluprečnika r , koji zavisi od klase LPS-a (tabela 3.) Sfera se kotrlja preko objekta u svim mogućim smerovima. Verovatnoća udara groma u bočne strane po pravilu je zanemarljiva za objekte niže od 60 m.

Kod objekata viših od 60 m mogu se pojaviti bočni udari, zbog toga treba razmotriti instalisanje bočnih prihvatnih sistema tako da zaštiti gornji deo objekata (gornjih 20% visine). U tom slučaju metoda fiktivne sfere se primenjuje samo za postavljanje prihvatnog sistema na krovu objekta.

The air-termination system is adequately installed if no point of the protected structure touches a sphere with radius (r), which depends on the LPS class (Table 3). The sphere rolls over the structure in all possible directions. The probability of a lightning strike to the sides is generally negligible for structures lower than 60 meters.

For structures taller than 60 meters, side strikes may occur, so it is necessary to consider installing side air-termination systems to protect the upper part of the structures (upper 20% of the height). In this case, the rolling sphere method is applied only for installing the air-termination system on the roof of the structure.

Sistem spusnih provodnika Down conductor system

Prilikom izbora broja i položaja spusteva treba uzeti u obzir da je rizik od preskoka i elektromagnetskih smetnji unutar objekta manji, ako je struja groma raspodeljena između nekoliko spusnih provodnika. Potrebno je spusteve ravnomerno i simetrično rasporediti po obodu objekta. Raspodelu struje poboljšava veći broj spusteva i prstenovi koji ih međusobno spajaju (izjednačenje potencijala). Usklađivanjem prihvatnog sistema spusteva i uzemljenja potrebno je postići najkraću putanju struje groma.

Tipična udaljenost između spusteva u zavisnosti od klase LPS je data u tabeli 3

When selecting the number and position of down conductors, it is important to consider that the risk of dangerous sparking and electromagnetic interference within the building is reduced if the lightning current is distributed among several down conductors. The down conductors should be evenly and symmetrically distributed around the perimeter of the building. The distribution of current is improved by a larger number of down conductors and rings that connect them (potential equalization). By aligning the down conductor system and grounding, the shortest path for the lightning current should be achieved. The typical distance between down conductors depending on the LPS class is given in Table 3.

Slika 2. Projektovanje prihvatnog sistema LPS-a prema metodi zaštitnog ugla i metodi mreže provodnika

- 2 air-termination rod
- 3 mesh size
- 4 down-conductor
- 5 earthing system with ring conductor
- h – height of the air-terminal above ground level
- α – protection angle

1. zaštitna zona
2. metalna konstrukcija el.uređaja
3. prihvatni provodnik
4. električna instalacija-provodnik
5. el. Uređaj (npr. uređaj za ventilaciju ili klimatizaciju)
- S –razmak razdvajanja
- α – zaštitni ugao
1. protective cone
2. metal construction of electrical devices
3. horizontal air-termination conductor
4. electrical installation-conductor
5. el. Device (e.g. ventilation or air conditioning device)
- S – separation distance
- α – protective angle

Slika 3. Štapna hvataljka koja se koristi za zaštitu el.uređaja na krovu (bez izjednačenja potencijala između metalnog kućišta i prihvatnog sistema)

Kućiste uređaja od izolacionog ili provodnog materijala, koji sadrže električnu ili elektronsku opremu, treba da budu postavljeni unutar prostora štićenog prihvatnim sistemom. Direktni udar groma u kućište uređaja doveo bi ne samo do njegovog uništenja, već i do velikih oštećenja električne i elektronske opreme povezane sa njim i ostalih uređaja unutar objekta.

Figure 3. Air-termination rod used to protect electrical devices on the roof (without equipotential bonding between the metal housing and the receiving system)

The enclosures of devices made of insulating or conductive material, which contain electrical or electronic equipment, should be placed within the area protected by the air-termination system. A direct lightning strike to the device enclosure would not only lead to its destruction but also cause significant damage to the electrical and electronic equipment connected to it and other devices within the structure.

Sistem uzemljenja

Earth-termination system

Zadatak uzemljenja je provođenje struje groma u zemlju, izjednačenje potencijala spusteva i kontrola potencijala u blizini provodnih delova objekta.

Dubina ukopavanja i tip uzemljivača treba da budu takvi da se izbegne korozija, sušenje i smrzavanje zemlje.

Preporučuje se da se prvih pola metra vertikalnog uzemljivača ne smatra efikasnim u uslovima smrzavanja zemlje.

Duboko ukopani uzemljivači mogu biti efikasni kada specifična otpornost opada sa dubinom zemlje i kada se slojevi manje otpornosti nalaze na dubinama većim od onih do kojih se štapni uzemljivači obično pobadaju.

Ispitni spoj olakšava merenje otpornosti uzemljenja.

Tipovi rasporeda uzemljivača

Raspored tipa A

Sistem uzemljenja tipa A je odgovarajući za niske objekte (porodične kuće) i postojeće objekte. Sastoji se od horizontalnih i vertikalnih uzemljivača (sondi) povezanih sa svakim spustom.

Raspored tipa B

Prstenasti uzemljivač treba da bude ukopan na dubini od najmanje 0,5m i na udaljenosti od 1m od spoljnih zidova.

Temeljni uzemljivač se sastoji od provodnika postavljenih ispod površine zemlje u temelj objekta (u beton). Prednost takvih uzemljivača je što su zaštićeni od korozije. Treba napomenuti da armatura u betonu generiše galvanski potencijal iste visine kao bakarni provodnici u zemlji. Time se dobija dobro inženjersko rešenje projekta sistema uzemljenja.

Tamo gde je nivo podzemnih voda visok, temelj objekta treba da se izoluje od podzemnih voda, ispod temelja se postavlja hidroizolacija koja ujedno predstavlja i elektroizolaciju. Uobičajena praksa kod takvih vodonepropusnih temelja jeste da se na dno jame za temelj nalije mršavi sloj betona približno 10–15cm debljine na koji se polaže izolacija, a zatim i betonski temelj.

U mršavi sloj betona na dnu jame za temelj mora se postaviti temeljni uzemljivač, koji se sastoji od mreže čije okce nije veće od 10m.

Ako izvođač građevinskih radova ne dozvoljava prodor provodnika kroz hidroizolaciju, veze sa uzemljivačima treba napraviti izvan objekta.

Sistem uzemljenja Earth-termination system

The task of the earth-termination system is to conduct the lightning current into the ground, equalize the potential of the down conductors, and control the potential near the conductive parts of the structure. The depth of burial and type of earth-termination system should be such that corrosion, drying, and freezing of the soil are avoided. It is recommended that the first half meter of the vertical earth-termination system is not considered effective in freezing soil conditions. Deeply buried earth-termination systems can be effective when the specific resistance decreases with soil depth and when layers of lower resistance are found at depths greater than those typically reached by rod electrodes. A test joint facilitates the measurement of earth-termination system resistance.

Types of earth-termination system arrangements:

Type A Arrangement: The Type A earth-termination system is suitable for low structures (residential houses) and existing structures. It consists of horizontal and vertical earth-termination systems (probes) connected to each down conductor.

Type B Arrangement: A ring earth-termination system should be buried at a depth of at least 0.5 meters and at a distance of 1 meter from the outer walls. The foundation earth-termination system consists of conductors placed below the ground surface in the building's foundation (in concrete). The advantage of such earth-termination systems is that they are protected from corrosion. It should be noted that the reinforcement in the concrete generates a galvanic potential of the same height as copper conductors in the ground, providing a good engineering solution for the earth-termination system design.

Where the groundwater level is high, the building foundation should be isolated from groundwater by placing waterproofing, which also acts as electrical insulation, under the foundation. The usual practice for such waterproof foundations is to pour a lean concrete layer approximately 10-15 cm thick at the bottom of the foundation pit, on which the insulation is laid, followed by the concrete foundation. In the lean concrete layer at the bottom of the foundation pit, a foundation earth-termination system must be placed, consisting of a mesh with a mesh size not exceeding 10 meters. If the construction contractor does not allow the penetration of conductors through the waterproofing, connections to the earth-termination systems should be made outside the structure.

Grafik 1. Najmanja dužina l_1 svakog uzemljivača u odnosu na klasu LPS-a

Najmanja dužina uzemljivača:

l_1 za horizontalne uzemljivače

0,5 l_1 za vertikalne uzemljivače (sonde)

$re \geq l_1$ za prstenaste ili temeljne uzemljivače – srednji poluprečnik re površine koju obuhvata uzemljivač ne sme biti manji od iznosa l_1

Graph 1. The smallest length l_1 of each grounding device in relation to the class of LPS

Minimum length l_1 of each earth electrode according to the class of LPS

The minimum length of each earth electrode at the base of each down-conductor is

- l_1 for horizontal electrodes, or
- $0,5 l_1$ for vertical (or inclined) electrodes

For the ring earth electrode (or foundation earth electrode), the mean radius r_e of the area enclosed by the ring earth electrode shall be not less than the value l_1 :

EN 62305-4

U ovom standardu date su adekvatne mere za zaštitu od prenapona (SPM) unutar objekta, pomoću kojih se može smanjiti rizik od trajnih kvarova zbog elektromagnetskih impulsa usled atmosferskog pražnjenja (LEMP)

- Sistemi za izjednačavanje potencijala na granici zaštitnih zona
- Magnetno ekraniranje
- Prenaponska zaštita (SPD) – Surge Protection Devices.

EN 62305-4

This standard provides adequate measures for surge protection (SPM) systems within a facility to reduce the risk of permanent failure due to LEMPs.

- Systems for equalizing the potential at the border of protective zones
- Magnetic shielding
- Surge Protection Devices (SPD).

Wall bracket, intended for mounting conductors directly on a concrete pillar or building wall. Suitable for solid wall with a screw length of 50 mm and a wall plug Ø 8 mm.					

The background of the entire page is a solid blue color. Overlaid on this is a complex, abstract pattern of thin, light blue lines. These lines form a grid of squares, but the squares are not perfectly aligned or uniform in size, creating a sense of depth and movement, as if they are overlapping or receding into the distance.

Test joint box for underground installation.					

The background of the slide is a technical drawing, likely a mechanical or structural blueprint, rendered in a light blue color on a darker blue background. It features various lines, dimensions, and labels. A prominent feature is a large, complex structure with many lines and dimensions, possibly a machine or a building component. There are also smaller details and sections labeled with letters like A, B, C, D, E, F, G, H, I, and J. The overall style is that of a professional engineering drawing.

CU						

The background of the slide is a detailed architectural drawing, likely a site plan or a section of a building. It features a grid of lines, with solid and dashed lines representing walls, paths, and structural elements. Various dimensions are noted throughout the drawing, such as 0.70, 1.20, 1.30, 2.50, 2.70, 4.00, 4.20, 4.30, 5.00, 6.00, 6.70, 7.00, 7.30, 7.50, 7.70, 8.00, 8.20, 8.50, 8.70, 9.00, 9.20, 9.50, 9.70, 10.00, 10.20, 10.50, 10.70, 11.00, 11.20, 11.50, 11.70, 12.00, 12.20, 12.50, 12.70, 13.00, 13.20, 13.50, 13.70, 14.00, 14.20, 14.50, 14.70, 15.00, 15.20, 15.50, 15.70, 16.00, 16.20, 16.50, 16.70, 17.00, 17.20, 17.50, 17.70, 18.00, 18.20, 18.50, 18.70, 19.00, 19.20, 19.50, 19.70, 20.00, 20.20, 20.50, 20.70, 21.00, 21.20, 21.50, 21.70, 22.00, 22.20, 22.50, 22.70, 23.00, 23.20, 23.50, 23.70, 24.00, 24.20, 24.50, 24.70, 25.00, 25.20, 25.50, 25.70, 26.00, 26.20, 26.50, 26.70, 27.00, 27.20, 27.50, 27.70, 28.00, 28.20, 28.50, 28.70, 29.00, 29.20, 29.50, 29.70, 30.00, 30.20, 30.50, 30.70, 31.00, 31.20, 31.50, 31.70, 32.00, 32.20, 32.50, 32.70, 33.00, 33.20, 33.50, 33.70, 34.00, 34.20, 34.50, 34.70, 35.00, 35.20, 35.50, 35.70, 36.00, 36.20, 36.50, 36.70, 37.00, 37.20, 37.50, 37.70, 38.00, 38.20, 38.50, 38.70, 39.00, 39.20, 39.50, 39.70, 40.00, 40.20, 40.50, 40.70, 41.00, 41.20, 41.50, 41.70, 42.00, 42.20, 42.50, 42.70, 43.00, 43.20, 43.50, 43.70, 44.00, 44.20, 44.50, 44.70, 45.00, 45.20, 45.50, 45.70, 46.00, 46.20, 46.50, 46.70, 47.00, 47.20, 47.50, 47.70, 48.00, 48.20, 48.50, 48.70, 49.00, 49.20, 49.50, 49.70, 50.00, 50.20, 50.50, 50.70, 51.00, 51.20, 51.50, 51.70, 52.00, 52.20, 52.50, 52.70, 53.00, 53.20, 53.50, 53.70, 54.00, 54.20, 54.50, 54.70, 55.00, 55.20, 55.50, 55.70, 56.00, 56.20, 56.50, 56.70, 57.00, 57.20, 57.50, 57.70, 58.00, 58.20, 58.50, 58.70, 59.00, 59.20, 59.50, 59.70, 60.00, 60.20, 60.50, 60.70, 61.00, 61.20, 61.50, 61.70, 62.00, 62.20, 62.50, 62.70, 63.00, 63.20, 63.50, 63.70, 64.00, 64.20, 64.50, 64.70, 65.00, 65.20, 65.50, 65.70, 66.00, 66.20, 66.50, 66.70, 67.00, 67.20, 67.50, 67.70, 68.00, 68.20, 68.50, 68.70, 69.00, 69.20, 69.50, 69.70, 70.00, 70.20, 70.50, 70.70, 71.00, 71.20, 71.50, 71.70, 72.00, 72.20, 72.50, 72.70, 73.00, 73.20, 73.50, 73.70, 74.00, 74.20, 74.50, 74.70, 75.00, 75.20, 75.50, 75.70, 76.00, 76.20, 76.50, 76.70, 77.00, 77.20, 77.50, 77.70, 78.00, 78.20, 78.50, 78.70, 79.00, 79.20, 79.50, 79.70, 80.00, 80.20, 80.50, 80.70, 81.00, 81.20, 81.50, 81.70, 82.00, 82.20, 82.50, 82.70, 83.00, 83.20, 83.50, 83.70, 84.00, 84.20, 84.50, 84.70, 85.00, 85.20, 85.50, 85.70, 86.00, 86.20, 86.50, 86.70, 87.00, 87.20, 87.50, 87.70, 88.00, 88.20, 88.50, 88.70, 89.00, 89.20, 89.50, 89.70, 90.00, 90.20, 90.50, 90.70, 91.00, 91.20, 91.50, 91.70, 92.00, 92.20, 92.50, 92.70, 93.00, 93.20, 93.50, 93.70, 94.00, 94.20, 94.50, 94.70, 95.00, 95.20, 95.50, 95.70, 96.00, 96.20, 96.50, 96.70, 97.00, 97.20, 97.50, 97.70, 98.00, 98.20, 98.50, 98.70, 99.00, 99.20, 99.50, 99.70, 100.00. There are also several circular callouts with letters inside, such as A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z, and numbers 1 through 10. The drawing is a technical representation of a building or site, with precise lines and measurements.

Oznaka mernog mesta, namenjena označavanju mernog mesta.					
Marking of the measuring point, intended for marking the measuring point.					

The background of the slide is a technical drawing, likely a structural or electrical plan, rendered in a light blue color. It features a grid of lines, various circular and rectangular symbols, and dimension lines with numerical values. The drawing appears to be a detailed layout of a building or infrastructure project, with labels like 'A', 'B', 'C', 'D', 'E', 'F', 'G', 'H', 'I', 'J' and 'K' visible. The overall aesthetic is professional and technical.
